

## EN Installation instructions ES Instrucciones de Instalación

August 2021

### Before You Start/ Preparations

Please read all the instructions before you begin the installation.  
Improper installation will void warranty.

#### Important notice

After installation, make sure to keep the room within a temperature range of 60F to 80F and a relative humidity range between 30% and 65%. Excessively high or low temperature and relative humidity may cause this product to expand or contract and lead to visual defects of the floor that will not be warranted.

Variations in color, tone, grain patterns and other are naturally occurring characteristics of hardwood. Different production runs can have slight color and gloss variations, it is best to purchase all the flooring that is needed at one time to minimize variations within the flooring.

For the best result, make sure to always work from 2 to 3 cartons at a time and mixing the planks during the installation. This will result in a more natural looking floor.

Do not mix flooring with different model/item/SKU numbers together in the same installation as flooring with different model/item/SKU numbers are not intended to be installed together.

**This flooring has a pre-attached underlayment. This flooring is approved for use with Sentinel Protect Plus underlayment with built in vapor barrier. A 6-mil poly-film moisture barrier is required over concrete when not using Sentinel Protect Plus underlayment with built in vapor barrier. The use of the Sentinel Protect Plus underlayment under the product is warranted for residential applications only, including multifamily housing and condominiums (residential unit only). Do not use any additional underlayment in commercial applications (e.g. industrial areas, commercial foyers, restaurants, etc.) or any areas with heavy rolling loads. Using additional underlayment in commercial applications such as these will void the warranty. Do not install this flooring over carpet.**

• Calculate the room surface prior to installation and plan an extra 10% of flooring for cutting waste.

• In most cases, this product does not need to be acclimated. However, if the boxes of flooring were exposed over 2 hours to extreme temperatures (under 50°F or over 100°F) within the 12 hours before the installation, acclimation is required. In this case, keep the boards in room temperature for at least 12 hours in unopened package before you start the installation. The room temperature must be maintained consistent between 60° to 80°F before and during installation.

• For floor surfaces exceeding 4000 sf and or lengths exceeding 66 ft, use expansion moldings.

• Do not install cabinets or fixed objects on top of the flooring. Proper expansion space (1/4") is required. Undercut all doorjambs.

• Inspect your subfloor before you begin. It must be clean and level to 3/16" within a 10 ft span.

• Although this floor is water resistant, it is not a moisture barrier. The subfloor must be dry (max 2.5% moisture content - CM method). This product is also not to be installed in areas that have a risk of flooding such as saunas or outdoor areas. When employing the direct glue down installation method, DO NOT include a 6-mil poly vapor barrier. Flooring material must be adhered directly to the subfloor.

• If this flooring is intended to be installed over an existing wood floor, or a plywood subfloor, it is recommended to repair any loose boards or squeaks before you begin the installation.

• Concrete subfloors must be fully cured for at least 60 days, and should have minimum 6-mil poly-film as a moisture barrier between the concrete subfloor and the flooring. Subfloor should be flat and level within 3/16" over a 10' span. If necessary, grind high spots down and level low spots with an appropriate leveling compound.

• Decide the installation direction. It is recommended to install the length direction of the planks parallel to the main light direction.

• Measure the area to be installed: The board width of the last row shall not be less than 2". If so, adjust the width of the first row to be installed. In narrow hallways, it is recommended to install the floor parallel to the length of the hall.

• Inspect each individual plank one by one before installation. No claims on surface defects will be accepted after installation.

• For ease of installation we recommend that planks which are 72" or more in length are installed with two people.

### IMPORTANT NOTICE

**In-Floor Radiant Heat:** Flooring can be installed over 1/2" (12mm) embedded radiant heat. Radiant heat systems must have a minimum of 1/2" (12mm) separation from the product. Maximum operating temperature should never exceed 85°F (30°C). Use of an in-floor temperature sensor is recommended to avoid overheating.

• Before installing over newly constructed radiant heat systems, operate the system at maximum capacity to force any residual moisture from the cementitious topping of the radiant heat system. The maximum moisture content should be 2.5% (CM method). Before starting the installation, turn the heat off for 24 hours before, during and 24 hours after installation when installing over radiant heated subfloors.

• Make sure that the temperature in the room is between 60°F (15°C) and 80°F (25°C) during installation.

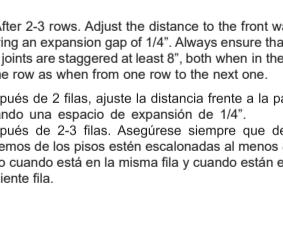

• Once the installation has been completed, the heating system should be turned on and increased gradually (5 degree increments) until returning to normal operating conditions.

• Refer to the radiant heat system's manufacturer recommendations for additional guidance.

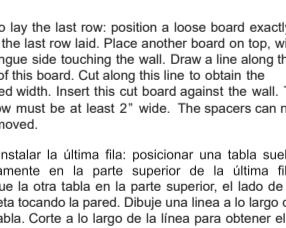

**Warning:** Electric heating mats that are not embedded into the subfloor are not recommended for use underneath the flooring. Using electric heating mats that are not embedded and applied directly underneath the flooring will void the warranty.

### Tools and supplies required

- Spacers • Rubber Mallet • Ruler • Pencil
- Tape Measure • Utility Knife

① After thoroughly cleaning the subfloor, you should begin laying in the left-hand corner. Place the first plank 1/4" from the left wall. Use spacers between the wall and the floorboard.

② Second Plank, first row. Drop the plank and gently press down the end with a rubber mallet so it firmly locks into the previous plank until both are at the same height. Make sure both planks are perfectly aligned. NOTE: If you notice both planks aren't at the same height or are not well locked together, please follow the disassembling instructions at the bottom of the page, disassemble and check if any debris stuck inside the lock is obstructing.

Al final de la última linea, dejar un espacio de 1/4" de la pared y medir el largo de la última placa para encollarla.

③ At the end of the first row, leave an expansion gap of 1/4" to the wall and measure the length of the last plank to fit.

④ To cut the plank, use a simple utility knife and ruler, and with the top side facing up, cut heavily and several times on the same axis. The knife needs to cut through the veneer. You can then push one half of the plank down using your other hand to hold the second plank while it splits naturally.

Para cortar el tablón, use un cuchillo y una regla, con el lado superior hacia arriba, corte fuertemente y varias veces sobre el mismo eje. El cuchillo debe cortar completamente a través de la capa de madera. Despues puede empujar la mitad del tablón hacia abajo usando la otra mano para sostener la otra mitad cerca a la linea de corte. El tablón se separa naturalmente.

⑤ Position of the planks: Correct Posición de las planchas: Correcta

Position of the planks: Incorrect Posición de las planchas: Incorrecta

Position of the mallet: Incorrect Posición del martillo: Incorrecta

⑥ Start the second row with the leftover cut part of the last plank of the previous row. This small plank should measure at least 12". Otherwise, use another plank that should be cut in two. The end joints of each adjoining row should not be closer than 8" to each other.

Comience la segunda fila con la parte cortada de la última fila de la anterior. Este pequeño tablón debe medir al menos 12". De lo contrario, puede usar otro de los tablones y cortarlo en dos. En cualquier distancia entre las juntas de los extremos de cada fila contigua no debe ser menor de 8".

⑦ Look the long side of the plank into the previous row and place it tight to the short end of the previous plank with an angle of 30 degrees. Drop the plank and gently press down the end with a rubber mallet so it firmly locks into the previous plank until both are at the same height. Make sure both planks are perfectly aligned. NOTE: If you notice both planks aren't at the same height or are not well locked together, please follow the disassembling instructions at the bottom of the page, disassemble and check if any debris stuck inside the lock is obstructing.

Ensamble el lado largo de la tabla en la fila previa con un ángulo de 30 grados. Deja caer gentilmente la tabla y presione el extremo con un mazo de goma para que quede firmemente fijada a la tabla anterior asegurándose de que ambas tablas estén perfectamente alineadas. NOTA: Si observa ambas tablas no están a la misma altura o no están bien encerrados juntos, por favor, siga las instrucciones de desmontaje en la parte inferior de la página, desmonte y compruebe si hay algo obstruyendo el cierre.

⑧ To lay the last row, position a loose board exactly on top of the last row laid. Place another board on top, with the tongue side along the edge of this board. Cut along this line to obtain the required width. Insert this cut board against the wall. The last row must be at least 2" wide. The spacers can now be removed.

Para instalar la última fila: posicionar una tabla suelta exactamente en la parte superior de la última fila. Colocar la otra tabla en la parte superior, el lado de la lengüeta tocando la pared. Dibuje una linea a lo largo de esta tabla. Corte a lo largo de la linea contra la pared. La ultima fila debe tener al menos 2" de ancho. Los espaciadores se pueden eliminar.

⑨ After 2-3 rows, adjust the distance to the front wall by leaving an expansion gap of 1/4". Always ensure that the end points are staggered at least 8", both when in the same row as when from one row to the next one.

Después de 2 filas, ajuste la distancia a la pared, dejando una expansión de 1/4".

Después de 2-3 filas. Asegúrese siempre que los extremos de los pisos estén escalonados al menos 8", tanto cuando está en la misma fila y cuando están en la siguiente fila.

⑩ To lay the last row: position a loose board exactly on top of the last row laid. Place another board on top, with the tongue side along the edge of this board. Cut along this line to obtain the required width. Insert this cut board against the wall. The last row must be at least 2" wide. The spacers can now be removed.

Para instalar la última fila: posicionar una tabla suelta exactamente en la parte superior de la última fila. Colocar la otra tabla en la parte superior, el lado de la lengüeta tocando la pared. Dibuje una linea a lo largo de esta tabla. Corte a lo largo de la linea contra la pared. La ultima fila debe tener al menos 2" de ancho. Los espaciadores se pueden eliminar.

⑪ After 2-3 rows, adjust the distance to the front wall by leaving an expansion gap of 1/4". Always ensure that the end points are staggered at least 8", both when in the same row as when from one row to the next one.

Después de 2 filas, ajuste la distancia a la pared, dejando una expansión de 1/4".

Después de 2-3 filas. Asegúrese siempre que los extremos de los pisos estén escalonados al menos 8", tanto cuando está en la misma fila y cuando están en la siguiente fila.

⑫ Door molding and skirting: lay a board (with the decorative side down) next to the door molding and as shown in the figure. Then slide the floorboard under molding.

Puerta y zócalo: colocar una tabla (con el lado decorativo hacia abajo) junto a la moldura de la puerta, como se muestra en la figura. Luego, deslice el piso bajo la puerta.

⑬ Coordinating moldings are available to finish the job where transition trim are needed.

Hay disponibles molduras de coordinación para terminar el trabajo donde se necesitan ajustes de transición.

⑭ Maintenance

• Sweep the floor daily as needed.

• Never drag or slide heavy objects or furniture across the floor.

• Clean up spills and excessive liquids immediately.

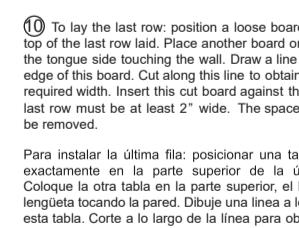

• Damp mop as needed. Use recommended wood floor cleaners that do not contain wax or oil.

• Protect floors from sustained direct sunlight. Close blinds or drapes during peak sunlight hours.

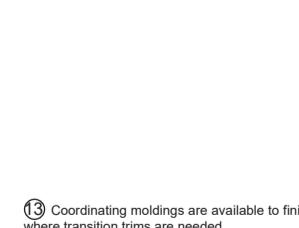

• Use proper floor protection devices such as felt protectors under furniture and all chair legs.

• Use a mat at entry ways and under rolling chairs (ensure the mat does not have a rubber backing).

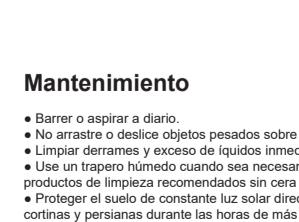

• Do not use abrasive cleaners, bleach or wax to maintain the floor.

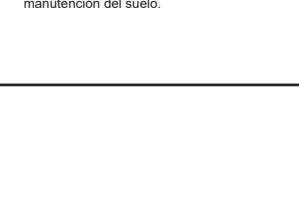

⑤ To lay the last row: position a loose board exactly on top of the last row laid. Place another board on top, with the tongue side along the edge of this board. Cut along this line to obtain the required width. Insert this cut board against the wall. The last row must be at least 2" wide. The spacers can now be removed.

⑥ After 2-3 rows, adjust the distance to the front wall by leaving an expansion gap of 1/4". Always ensure that the end points are staggered at least 8", both when in the same row as when from one row to the next one.

⑦ To lay the last row: position a loose board exactly on top of the last row laid. Place another board on top, with the tongue side along the edge of this board. Cut along this line to obtain the required width. Insert this cut board against the wall. The last row must be at least 2" wide. The spacers can now be removed.

⑧ After 2-3 rows, adjust the distance to the front wall by leaving an expansion gap of 1/4". Always ensure that the end points are staggered at least 8", both when in the same row as when from one row to the next one.

⑨ After 2-3 rows, adjust the distance to the front wall by leaving an expansion gap of 1/4". Always ensure that the end points are staggered at least 8", both when in the same row as when from one row to the next one.

⑩ After 2-3 rows, adjust the distance to the front wall by leaving an expansion gap of 1/4". Always ensure that the end points are staggered at least 8", both when in the same row as when from one row to the next one.

⑪ After 2-3 rows, adjust the distance to the front wall by leaving an expansion gap of 1/4". Always ensure that the end points are staggered at least 8", both when in the same row as when from one row to the next one.

⑫ After 2-3 rows, adjust the distance to the front wall by leaving an expansion gap of 1/4". Always ensure that the end points are staggered at least 8", both when in the same row as when from one row to the next one.

⑬ After 2-3 rows, adjust the distance to the front wall by leaving an expansion gap of 1/4". Always ensure that the end points are staggered at least 8", both when in the same row as when from one row to the next one.

⑭ After 2-3 rows, adjust the distance to the front wall by leaving an expansion gap of 1/4". Always ensure that the end points are staggered at least 8", both when in the same row as when from one row to the next one.

⑮ After 2-3 rows, adjust the distance to the front wall by leaving an expansion gap of 1/4". Always ensure that the end points are staggered at least 8", both when in the same row as when from one row to the next one.

⑯ After 2-3 rows, adjust the distance to the front wall by leaving an expansion gap of 1/4". Always ensure that the end points are staggered at least 8", both when in the same row as when from one row to the next one.

⑰ After 2-3 rows, adjust the distance to the front wall by leaving an expansion gap of 1/4". Always ensure that the end points are staggered at least 8", both when in the same row as when from one row to the next one.

⑱ After 2-3 rows, adjust the distance to the front wall by leaving an expansion gap of 1/4". Always ensure that the end points are staggered at least 8", both when in the same row as when from one row to the next one.

⑲ After 2-3 rows, adjust the distance to the front wall by leaving an expansion gap of 1/4". Always ensure that the end points are staggered at least 8", both when in the same row as when from one row to the next one.

⑳ After 2-3 rows, adjust the distance to the front wall by leaving an expansion gap of 1/4". Always ensure that the end points are staggered at least 8", both when in the same row as when from one row to the next one.

㉑ After 2-3 rows,
