

GLUELESS LAMINATE FLOORING

7 MM THICK

7.64" WIDE x 50.79" LONG

24.24 SQ. FT. - 9 PLANKS PER BOX

---

- Simple Do-It-Yourself Glueless Installation

- Realistic Wood Look

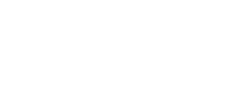

- Don't Forget Your Moldings!

## Glueless Piso Laminado

Panel grueso de 7 MM, 194mm x 1290mm

24.24 sq. ft. - 9 tablones por caja

- Fácil instalación sin pegamento que puede realizar usted mismo
- Madera que parece real
- ¡No olvide sus molduras!

RESIDENTIAL  
WARRANTY

15 AÑOS  
GARANTÍA PARA  
USO RESIDENCIAL

## INSTALLATION INSTRUCTIONS

### Installation Grade Levels, Methods and Environment

This product can be installed on, above or below grade levels; either floated or glued; indoor use only.

**SAFETY CAUTION: USE SAFETY GLASSES AND GLOVES WHEN CUTTING THIS PRODUCT. DURING THE CUTTING PROCESS, LAMINATE MAY CREATE WOOD DUST; BE SURE TO INSTALL IN A WELL-VENTILATED AREA.**

**WARNING:** Drilling, sawing, sanding or machining wood products generates wood dust, a substance known to the State of California to cause cancer. Avoid inhaling wood dust or use a dust mask or other safeguards for personal protection.

### Owner/Installer Responsibility

Owner/installer should inspect the flooring for defects prior to installation and during installation. During installation, do not install boards which appear to be defective. Owner/installer is responsible for the job site being structurally acceptable (see local building codes) for laminate flooring installation. Owner/installer is responsible for flooring failures resulting from or related to subfloor, subsurface, job site damage or deficiencies after the flooring has been installed.

### Job Site Condition

Manufacturer will decline responsibility for situations associated with improper installation or poor site conditions. Pounding of basement concrete floors, drywall and plasterwork, plumbing, etc. must be completed well in advance of the floor delivery. Jobsites should be in a normal living condition, i.e., room temperature of 60°F–80°F and relative humidity (RH) level of 35%–60%.

### Concrete Subfloor Requirements

Concrete subfloor must be cured, clean and must be flat and level (3/16" inch for every 10' feet).

Minimum moisture barrier is 6 mil (0.006" inch) virgin polyethylene sheet.

Concrete subfloor must have a moisture content of:

- Less than 5% as per Tramex Concrete Moisture Encounter or;
- Less than 3 lbs. per 1000 square feet per 24 hours per Calcium Chloride test (ASTM F-1869) or;
- Less than 2.5% per Calcium Carbide (CM) Test (ASTM D-4944-04 modified).

### Wood Subfloor Requirements

Wood subfloor must be clean and must be flat and level (3/16" inch for every 10' feet).

Wood subfloor must have moisture content of less than 14%.

Wood subfloor must be structurally sound.

### Underlayment

Sound reducing underlayment is required.

### Existing Floor Coverings

Acceptable floor coverings include: linoleum, vinyl carpet tile, terrazzo, ceramic tile and other "moisture sealing floors."

Unacceptable floor coverings include: carpet, needle punch felt, edge glued linoleum and other "moisture absorbing flooring."

### Radiant Heated Floor

This product can be installed over radiant heated floor provided that the heating element is installed into a concrete subfloor. Lower heating system to 60°F for 1 week before installation. After installation, slowly increase the temperature in increments of 10°F per hour. The finished floor surface temperature must not exceed 85°F throughout the service life of the floor. Follow installation requirements for concrete as outlined above.

### Wet Areas

Do not install in saunas, swimming pool areas and other similar extreme wet areas.

Fill all expansion gaps with water repellent sealant. Seal joints between panels.

### Acclimation

Store the flooring in the room where they are to be installed for a minimum of 48 hours, still in their packaging, and at normal living conditions, i.e., room temperature of 60°F–80°F and relative humidity (RH) level of 35%–60%, prior to beginning installation work.

### Expansion Gaps

Allow expansion gap of 5/16" inch to 3/8" inch around perimeter of the floor and vertical structures. Floor spanning greater than 40' feet, length or width, require expansion T-molding. Wall openings, with or without door, require expansion T-molding.

### Tools

You will need the following tools to install this product: spacers, tape measure, circular saw, saw blade with carbide tip for finish cuts, work gloves, kneepads and safety glasses.

### Helpful Considerations

Work in a well-lit area. Remove all existing moldings. Install flooring perpendicular to the direction of the floor joists. If possible, install the boards parallel to the direction of the light entering the room. Install the underlayment in the same direction that the laminate flooring is to be installed. Tape all seams. Check door clearances, making necessary adjustments before laying the floor.

### Maintenance and Care

Damage resulting from improper care and maintenance of the floor are not covered by warranty.

1. Sweep or dust mop regularly. If vacuuming, use vacuum head with a brush or felt, not a head equipped with a beater.
2. Do not leave any amount of liquids (water, juice, soft drinks, spills, etc.) on the floor. Clean any wet spots immediately.

3. Avoid excessive exposure to water from tracking during periods of inclement weather.

4. Never use a wet mop or soak floor with water or liquid cleaners. Liquid can seep between the cracks and cause moisture damage.

5. Never use a steam cleaner.

6. Do not use any cleaning agents containing wax, oil or polish. Left over residue will form a dull film. For tough spots, use damp cloth or apply a little alcohol on a clean cloth and rub to remove the spot.

7. Do not use steel wool or scouring powder which will scratch the floor.

8. When moving furniture, never drag across the floor. Lift the furniture over the floor and always use felt furniture pads.

### IMPORTANT HEALTH NOTICE FOR MINNESOTA RESIDENTS ONLY:

THESE BUILDING MATERIALS EMIT FORMALDEHYDE. EYE, NOSE, AND THROAT IRRITATION, HEADACHE, NAUSEA AND A VARIETY OF ASTHMA-LIKE SYMPTOMS, INCLUDING SHORTNESS OF BREATH, HAVE BEEN REPORTED AS A RESULT OF FORMALDEHYDE EXPOSURE. ELDERLY PERSONS AND YOUNG CHILDREN, AS WELL AS ANYONE WITH A HISTORY OF ASTHMA, ALLERGIES, OR LUNG PROBLEMS, MAY BE AT GREATER RISK. RESEARCH IS CONTINUING ON THE POSSIBLE LONG-TERM EFFECTS OF EXPOSURE TO FORMALDEHYDE. REDUCED VENTILATION MAY ALLOW FORMALDEHYDE AND OTHER CONTAMINANTS TO ACCUMULATE IN THE INDOOR AIR. HIGH INDOOR TEMPERATURES AND HUMIDITY RAISE FORMALDEHYDE LEVELS. WHEN A HOME IS TO BE LOCATED IN AREAS SUBJECT TO EXTREME SUMMER TEMPERATURES, AN AIR-CONDITIONING SYSTEM CAN BE USED TO CONTROL INDOOR TEMPERATURE LEVELS. OTHER MEANS OF CONTROLLED MECHANICAL VENTILATION CAN BE USED TO REDUCE LEVELS OF FORMALDEHYDE AND OTHER INDOOR AIR CONTAMINANTS. IF YOU HAVE ANY QUESTIONS REGARDING THE HEALTH EFFECTS OF FORMALDEHYDE, CONSULT YOUR DOCTOR OR LOCAL HEALTH DEPARTMENT.

### 15 YEAR LIMITED RESIDENTIAL WARRANTY

#### Wear, Staining and Fading

Wildwood™ warrants to the original purchaser that the surface wear layer of its laminate flooring will not wear through\*, stain or fade from sunlight or artificial light throughout the life of the product when used under normal residential traffic conditions.

If the product wears through, stains or fades, Wildwood will at its option replace or refund the portion of the floor in question as covered under this warranty. This warranty does not cover labor costs or any other incidental expenses incurred as a result of a covered defect.

#### Warranty Exclusions

The owner/installer must inspect the color, finish and quality of the flooring prior to installation. Wildwood is not responsible for labor costs incurred for flooring installed with visible defects. This warranty does not cover damage caused by improper installation, negligence, water erosion, abrasion, extreme heat or temperature, cleaning care or maintenance contrary to written instructions provided by Wildwood, physical abuse or misuse, accidents causing indentation, scratching, impact, cutting, freight damage, alteration, or any wear or damage caused by acts of God. This warranty does not apply if product is installed in areas where condensation repeatedly occurs, or any other areas contrary to the recommendations of Wildwood, including, but not limited to, exterior applications, unstable/improper subfloors, areas exposed to excessive topical and ground moisture.

\*Wear through is defined as total loss of pattern in a minimum of a 2-square-inch area. Loss of gloss is not considered wear through.

#### For Warranty Service

To make a claim, you may:

- 1) Contact your Wildwood retailer no later than 30 days after the discovery of the defect. Proof of purchase is required. Your retailer will assist in coordinate resolution of your claim. OR

2) Contract a certified independent inspector ([www.NWFA.org](#)). The inspector should submit a copy of the inspection report directly to your Wildwood retailer for consideration. Note that while independent inspections are credible and usually reliable, the final decision rests solely with Wildwood. Only NWFA inspectors or other certified inspectors approved in writing, in advance by Wildwood will be considered.

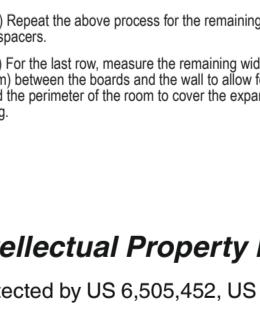

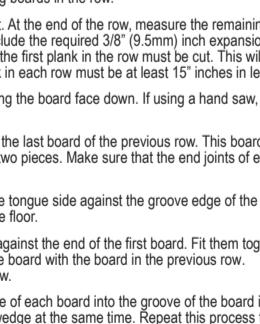

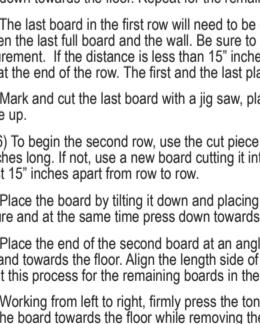

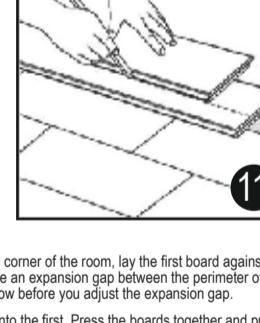

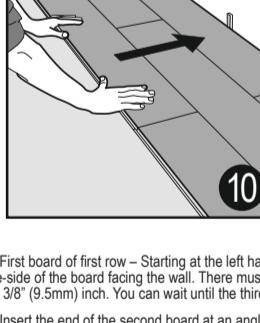

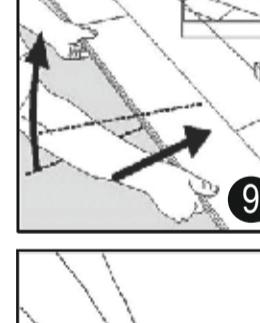

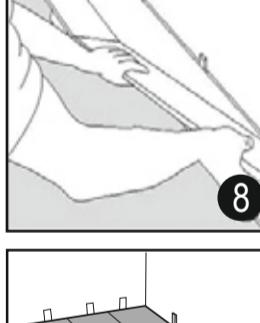

Figure 9) Working from left to right, firmly press the tongue of each board into the groove of the board in the previous row. Push the board towards the floor while removing the wedge at the same time. Repeat this process for the remaining boards in the room.

Figure 10) Repeat the above process for the remaining floor. Remember to adjust for the 3/8" (9.5mm) inch expansion gap using spacers.

Figure 11) For the last row, measure the remaining width and cut the boards accordingly. Be sure to leave 3/8" (9.5mm) between the boards and the wall to allow for expansion. Remove spacers from the perimeter and install moldings around the perimeter of the room to cover the expansion gap space. Fasten moldings into the wall and not through the flooring.

## INSTRUCCIONES DE INSTALACIONES

### Métodos, medio ambiente y niveles de grado de instalación

Este producto se puede instalar en, sobre o por debajo de los niveles de grado; ya sea de manera flotante o pegado; sólo para uso en interiores.

### PRECAUCIONES DE SEGURIDAD: UTILICE LENTES DE SEGURIDAD Y GUANTES CUANDO CORTE ESTE PRODUCTO. DURANTE EL PROCESO DE CORTE, EL LAMINADO PUEDE CREAR ASERRÍN; ASEGÚRESE DE REALIZAR LA INSTALACIÓN EN UNA ZONA BIEN VENTILADA.

**ADVERTENCIA:** Taladrar, serrar, lijado o mecanizar productos de madera genera aserrín, una sustancia conocida en el estado de California por causar cáncer. Evite la inhalación de aserrín o utilice una mascarilla contra polvo u otro tipo de protección personal.

### Responsabilidad del instalador/propietario

El propietario/installador debe inspeccionar el suelo en busca de defectos antes y durante la instalación. Durante la instalación, no instale los tablones que parezcan estar defectuosos.

El propietario/installador es responsable de que el lugar de trabajo sea estructuralmente aceptable (consulte los códigos de construcción locales) para la instalación de pisos laminados.

El propietario/installador es responsable de las fallas en el suelo resultantes de o relacionados con el contrapiso, subfondo, daños al lugar de trabajo o deficiencias después de que el piso se ha instalado.

### Condiciones del lugar de trabajo

El fabricante no aceptará la responsabilidad de situaciones relacionadas con la instalación incorrecta o malas condiciones del lugar. Se debe de completar el vértido de pisos con base de hormigón, placa de yeso y enlucido, trabajos de plomería, etc. con suficiente antelación a la entrega del piso. El lugar de trabajo debe de encontrarse bajo condiciones normales de vida, es decir, a una temperatura ambiente de 60°F a 80°F y un nivel de humedad relativa (HR) del 35% al 60%.

### Requisitos del contrapiso de hormigón

El contrapiso de hormigón debe estar curado, limpio, plano y nivelado (3/16" de pulgada por cada 10' pies). La barrera mínima de humedad es una lámina de polietileno virgen de 6 mil (0.006" pulgadas).

El contrapiso de hormigón debe tener un contenido de humedad:

- Menor al 5% según el Verificador de humedad en concreto Tramex;
- Menor a 3 libras por cada 1000 pies cuadrados por cada 24 horas según la prueba de cloruro de calcio (ASTM F-1869);
- Menor al 2.5% según la prueba de carburo de calcio (CM) (ASTM D-4944-04 modificada).

### Requisitos del contrapiso de hormigón

El contrapiso de madera debe estar limpio, plano y nivelado (3/16" de pulgada por cada 10 pies).

El contrapiso de madera debe tener un contenido de humedad menor al 14%.

El contrapiso de madera debe ser estructuralmente firme.

### Soldado

Se requiere un soldado que reduzca el sonido.

### Tipos de revestimientos para pisos

Los revestimientos para pisos aceptables incluyen: linóleo, alfombras modulares de vinilo, terrazo, azulejo de cerámica y otros "pisos de sellado contra humedad."

Los revestimientos inaceptables para pisos incluyen: alfombra, fieltro punzonado, linóleo pegado en los bordes y otros "pisos que absorben humedad."

### Piso con calefacción radiante

Este producto se puede instalar sobre un piso con calefacción radiante siempre y cuando el elemento calefactor se instale en un contrapiso de hormigón. Disminuya la temperatura del sistema de calefacción a 60°F durante 1 semana antes de la instalación. Después de la instalación, poco a poco aumenta la temperatura en intervalos de 10°F por hora. La temperatura de la superficie del piso terminado no debe exceder los 85°F durante la vida útil del piso. Siga los requisitos de instalación del hormigón como se indicó anteriormente.

### Zonas húmedas

No instale en saunas, zonas de albercas y otras zonas similares con humedad extrema. Rellene todas las juntas de dilatación con sellador repelente al agua. Selle las juntas entre las panelas.

### Amacenamiento

Almacene el piso en la habitación donde se van a instalar durante un mínimo de 48 horas, todavía en su empaque, y en condiciones normales de vida, es decir, a una temperatura ambiente de 60°F–80°F y niveles de humedad relativa (HR) del 35% al 60%, antes de comenzar los trabajos de instalación.

### Juntas de dilatación

Deje una junta de dilatación de 5/16" de pulgada a 3/8" de pulgada alrededor del perímetro del piso y las estructuras verticales. El piso que abarque más de 40' pies, en longitud o anchura, requiere una moldura en T de dilatación. Las aberturas en la pared, con o sin puerta, requieren una moldura en T de dilatación.

### Herramientas

Necesitará las siguientes herramientas para instalar este producto: separadores, cinta métrica, sierra circular, hoja para sierra con punta de carburo para cortes de acabado, guantes de trabajo, rodillera y lentes de seguridad.

### Consideraciones útiles

Trabaje en un área bien iluminada. Elimine todas las molduras existentes.

Inst
