

AquaGuard

PREMIUM WATER RESISTANT
WOOD-BASED LAMINATE

8MM THICK
6.54" X 47.64" / 25.96 SQ. FT.
12 PLANKS PER BOX

166MM X 1210MM | 25.96 SQ. FT. | 12 TABLONES POR CAJA

- No Worry Water Resistance - Protects Against Water for 30 Hours!*
- Kid Friendly & Pet Friendly, Extremely Durable & Stain Resistant
- Wet Mop - Quick & Easy to Clean!
- Quick & Easy Locking Installation. No Glue, No Nails, No Mess!
- Looks & Feels Just Like Real Hardwood
- Ideal for Commercial & Residential Installation in Large Areas without Transitions
- Don't Forget Your Moldings

Up to 4x the Area vs. Traditional Laminates without Transitions!

PISOS LAMINADOS A BASE DE MADERA RESISTENTE AL AGUA

- La resistencia al agua evita preocupaciones - ¡Protege contra el agua durante 30 horas!
- Amigable con los niños y las mascotas; extremadamente durable y resistente a las manchas
- Utilice un trapeador húmedo - ¡Rápido y fácil de limpiar!
- Instalación de bloqueo rápido y fácil. ¡Sin pegamento, sin clavos, sin desorden!
- Se ve y se siente igual como los pisos de madera verdadera
- Ideal para instalación comercial y residencial en zonas grandes sin transiciones
- No se olviden las molduras

Thickness 8MM **Wear Rating** AC5 **Underlayment Required**

Residential Wear Lifetime Warranty* **Commercial Wear** 15 YEAR Warranty*

DISTRIBUTED BY:
Floor & Decor
2233 Lake Park Drive, Suite 400

EN Installation instructions **Laminate floor**
ES Instrucciones de Instalación **Suelo Laminado**

I. Before You Start/ Preparations
Please read all the instructions before you begin the installation.
Improper installation will void warranty.

Important note
All wood based products, even those specifically designed to have increased resistance to moisture, are hydroscopic (they will react to the moisture in the environment) and as a result will expand or contract. Therefore, it is important that the subfloor be rectified prior to the installation of the floor. Any construction dampness must be completely dry. Although this product has been designed to withstand minor water damage, excessive wetting is to be avoided and water splashes dried immediately. It is important that you check each plank for any manufacturing defects. Any faults must be reported back to the store or purchases for an immediate refund or replacement prior to the flooring being installed.

• Calculate the room surface prior to installation and plan an extra 10% of flooring for waste.

Keep the boards in room temperature for at least 48 hours in their original packaging. Do not start installation until the room temperature is between 18° and 25°C (65° y 77°F) before and during installation. For floor surfaces exceeding 400m² (4300 ft²) or lengths exceeding 20m (66 ft) and overlaps to new rooms and surface types which do not join symmetrically, use expansion joints to divide the floor sections.

• Inspect your subfloor before you begin. It must be clean, dry (max. 22.0%), flat (max. 3mm CM method) and level to 5mm (3/16") within a 3 meters (10 foot) span.

• If this flooring is intended to be installed over an existing wooden floor, it is recommended to repair any loose boards or squeaks before you begin installation.

• With a floating floor you must always ensure you leave a 1cm (1/2") gap between walls and fixtures such as pipes and pillars, stairs, etc. Tip: When installing and drilling holes, drill the holes 20mm (3/4") larger than the dimensions required.

• It is required to install a moisture barrier. Underlayments thicker than 3mm (1/8") are not advised. If the laminate flooring is being installed over concrete subfloors, a minimum 0.15mm (6 mil) plastic poly sheeting should be used as a moisture barrier.

• Relative Humidity Levels of your room should be maintained at 40-65% at 18-24°C (65° - 75°F).

• Decide the installation direction. It is recommended to install the length direction of the planks parallel to the main light direction.

• Measure the area to be installed. The board width of the last row should not be less than 50mm (2"). So, adjust the width of the first row to be installed. When measuring, take the free gap requirement of about 1mm (1/32") per meter. If you are installing in narrow hallways, install the floor parallel to the lengthways.

• Inspect your laminate flooring. No claims on surface defects will be accepted after installation.

• RADIANTE HEAT: Due to the speed of sudden temperature changes, which has the potential to negatively affect laminate flooring construction, it is not recommended to install over any electrical radiant heating systems. Instead, if the system is a radiant heating system will not be covered by the manufacturer's warranty. Below are instructions for water-based radiant heating systems.

Ensure the radiant heat surface temperature never exceeds 27°C (81°F). Before installing over newly constructed radiant heat systems, operate the system at maximum capacity to form any residual moisture. Once the system is operating at full capacity, turn off the system. Shut down the floor heating at least 48 hours prior to installation. Make sure that the temperature in the room is at least 15°C (60°F) during installation. If the room temperature is lower than 15°C (60°F), wait a gradual manner after installing the laminate floor. Refer to the radiant heat system's manufacturer recommendations for additional guidance.

Tools and supplies required

- Foam Underlayment • Spacers • Saw • Adhesive Tape • 6mil (or thicker) polyethylene vapor barrier for crawl space and concrete floor installations. • Rubber Mallet • Ruler • Pen & Tape Measure • Utility Knife • Construction Adhesive

For Bathroom, Laundry Room or Commercial Installation

It is important to seal any cut planks to ensure superior and warranted performance. When a flooring plank is cut to fit (either end or middle) it is always recommended to seal the perimeter of the installation. Once the flooring installation is complete, it is general Silicone based sealant should be applied around the perimeter of the floor (near the expansion space at walls). This should also include any other areas such as islands, doorways, columns, etc. where the laminate floor will have contact with the wall.

Branded and generic Silicone tubes are available at any local home center or hardware location.

Herramientas y artículos adicionales:

- Recubrimiento de espuma • Espaciadores • Sierra • Cinta adhesiva • Barrera de vapor de 6 mil (o más gruesa) para espacios de crawlspace y pisos de concreto • Martillo de goma • Regla • Lápiz • Cinta métrica • Cuchillo de uso general • Adhesivo para la construcción

Para baños, lavaderos o instalaciones comerciales

Es importante sellar cualquier corte de la placa para asegurar una mejor durabilidad y rendimiento. Cuando la placa de piso sea cortada para los acabados (corte de lado y terminados) un sellador es siempre necesario alrededor del perímetro de la instalación.

• Una vez que se ha terminado la instalación del piso, debe aplicar alrededor del perímetro (en el espacio de dilatación de los paneles). Esto deberá también incluir otras áreas tales como islas, pasillos, columnas, etc. donde el piso laminado tiene contacto con la pared.

• Los tubos de silicona de marca y genérico están disponibles en cualquier tienda de mejoras para el hogar o de ferretería.

II. Installation

1. After thoroughly cleaning the subfloor, you should install a foam underlayment. Run the foam underlayment in the same direction as the laminate floor. The underlayment should be butted side-by-side with no overlap. Tape seams together. If you are installing over a concrete subfloor, apply a 6 mil (or thicker) polyethylene vapor barrier to the underlayment. (Many foam underlays already have this plastic sheeting preattached).

Después de limpiar a fondo el contrapiso, debe instalar un recubrimiento de espuma. Ponga el recubrimiento de espuma en la misma dirección que los tableros de piso. El recubrimiento debe estar de lado a lado sin sobreposición. Tape las juntas. Si se está instalando sobre un concreto, aplique una barrera de vapor de polietileno (plástico) de 6 mil bajo el recubrimiento de espuma. (Muchos recubrimientos de plástico tienen esta lámina de plástico preatada).

2. Begin laying in the left-hand corner. Place the first board "10 1/2" from the left wall. Use spacers between the wall and the first board. Second plank, first now. Drop the plank and gently press down the end with a rubber mallet so it firmly locks into the previous plank. Continue to lay the planks in the same height. Make sure both planks are perfectly aligned. If the planks are not at the same height or are not well locked together, please take the time to remove the plank, disassemble and check if any debris is stuck inside the lock and is obstructing.

Comience el tendido en la esquina izquierda. Coloque la primera tabla "10 1/2" de la pared izquierda. Utilice los espaciadores entre la pared y el primer tablero. Segundo tablero, ahora. Deje caer la tabla y suavemente presione hacia abajo el extremo con un mazo de goma para que encaje firmemente en la otra tabla. Continúe colocando las tablas a la misma altura. Asegúrese de que ambos tableros estén perfectamente alineados. Si nota que los dos tableros no están a la misma altura o no están bien sujetos, por favor, quite la tabla, desmonte y compruebe si hay escombros atrapados en el interior de la unión que estén obstruyendo.

3. At the end of the first row, leave an expansion gap of 10mm (1/2") to the wall and measure the length of the last plank to it.

Al finalizar la primera fila (10mm (1/2") deje la pared y mida la longitud del último tablero que debe colocar.

4. If cutting with a jigsaw, the laminate surface should be turned down. If cutting with a hand saw, the laminate surface should be face up.

Si se corta con sierra caladora, la superficie del tablero debe estar hacia abajo. Si se corta con sierra de mano, la superficie laminada debe estar hacia arriba.

5. Start the second row with the leftover cut part of the first plank of the previous row. This small plank should be cut to fit the remaining gap. Place another plank that should be cut in two. At the same time, both sides cut are distant from the last 30cm (12").

Comience la segunda fila con la parte cortada sobrante del tablero de la fila anterior. Esta pieza cortada debe ser cortada para ajustarse al espacio que queda. Coloque otra tabla que sea cortada en dos. Al mismo tiempo, las dos cortes deben ser de al menos 30 cm (12") de distancia.

6. Click the long side of the plank into the previous row and place it tight to the short end of the previous plank. Gently press down the end with a rubber mallet so it firmly locks into the previous plank. Continue to lay the planks in the same height. Make sure both planks are at the same height or are not well locked together. Please take the time to remove the plank, disassemble and check if any debris is stuck inside the lock and is obstructing.

Comience el lado largo de la tabla en la fila anterior y coloque la tabla apretada al extremo cortado de la tabla anterior. Deje caer el tablero y suavemente presione hacia abajo el extremo con un mazo de goma para que encaje firmemente en la otra tabla. Continúe colocando las tablas a la misma altura. Asegúrese de que ambos tableros estén perfectamente alineados. NOTA: Si nota que los dos tableros no están a la misma altura o no están bien sujetos, por favor, quite la tabla, desmonte y compruebe si hay escombros atrapados en el interior de la unión que estén obstruyendo.

7. After 2-3 rows, adjust the distance to the front wall by leaving an expansion gap of 10mm (1/2"). Always remember to leave an expansion gap of 10mm (1/2") every 30cm (12"), both when in the same row as when from one row to the next.

Comience la tercera fila con la parte cortada sobrante del tablero de la fila anterior. Esta pieza cortada debe ser cortada para ajustarse al espacio que queda. Coloque otra tabla que sea cortada en dos. Al mismo tiempo, las dos cortes deben ser de al menos 30 cm (12") de distancia.

8. To lay the last row, position a loose board exactly 20mm (7/8") from the wall. Place the tongue edge touching the wall. Draw a line along the edge of this board to mark the first plank of the last row. Cut the first plank to the required width. Insert the first plank into the last row. The first plank should be at least 50mm (2") wide. The spans can then be closed.

Comience el lado largo del tablero de la fila anterior y coloque la tabla apretada al extremo cortado de la tabla anterior. Deje caer el tablero y suavemente presione hacia abajo el extremo con un mazo de goma para que encaje firmemente en la otra tabla. Continúe colocando las tablas a la misma altura. Asegúrese de que ambos tableros estén perfectamente alineados. NOTA: Si nota que los dos tableros no están a la misma altura o no están bien sujetos, por favor, quite la tabla, desmonte y compruebe si hay escombros atrapados en el interior de la unión que estén obstruyendo.

9. Holes for pipes: Measure the diameter of the pipe and cut a hole in the laminate floor to fit the pipe. Drill a hole that is 20mm (7/8") larger. Saw a piece to size in the figure above and glue the pipe into the hole. Drill a hole that is 20mm (7/8") larger. Saw a piece to size in the figure above and glue the pipe into the hole.

Orificio para tubería: mida el diámetro de la tubería y corte un agujero en el suelo laminado para que se ajuste la tubería en su sitio en el piso. Perfore un agujero de 20mm (7/8") más grande. Corte un pedazo a medida en el dibujo superior e introduzca la tubería en el agujero. Perfore un agujero de 20mm (7/8") más grande. Corte un pedazo a medida en el dibujo superior e introduzca la tubería en el agujero.

10. Door molding and skirting: lay a board (with the door opening) and slide it into the front wall, as shown in the figure above, then slide the tongue edge touching the wall.

Molduras de puerta y base: coloque una tabla (con el hueco de la puerta) y colóquela al lado de la puerta de la bodega, tal como se muestra en el dibujo superior, y deslice la tabla con una sierra de mano o equivalente. A continuación, deslice el tablero empalmado bajo la moldura.

III. Maintenance

Clean the floor regularly with a vacuum cleaner or dry mop. If necessary, the floor may be cleaned with a wet mop. To protect the floor from sand, we recommend using a soft broom or a feather duster to sweep debris at entries (but do not use mats with a rubber backing).

III. Mantenimiento

Limpie el piso regularmente utilizando una aspiradora o un trapo seco. Si es necesario, el piso puede limpiarse con un trapo húmedo. Para proteger el piso de la arena, recomendamos usar un escoba suave o un paño de plumón para limpiar la arena en las entradas (pero no use alfombras con fondo de goma).

IV. Disassembling / Desmontaje

Separate the whole row by lifting it up slightly at an angle. To separate the end joint of the planks, leave them flat on the ground and tap them apart as shown.

Separe toda la fila levantándola con delicadeza a un ángulo. Para separar las juntas de construcción de los tableros, colóquelos planos en el suelo y déjelos separar como se muestra.
