

MOLDINGS FOR HARDWOOD FLOOR INSTALLATION GUIDE

REDUCING TO VINYL OR LOW PILE CARPET

Reducer moldings are designed to make a smooth transition between floors of different heights. Reducers are perfect for connecting a hardwood floor with either a vinyl or low pile carpet floor.

Choose the right size for the flooring height:

Pennwood Products offers reducer in either a tongue and groove configuration, flush mount or overlap for floating installations. Because there are variances in thickness with some manufacturer's hardwood floors, the tongue and groove configuration is match to the flooring to prevent breakage after the molding is installed.

OVERLAP REDUCER

Overlap Reducer

Overlap reducers serve as a finishing transition for a floating hardwood floor when a gradual transition between floors of different heights is necessary.
