

Protect your investment for years to come with STONETECH® surface care products.

STONETECH offers reliable, high quality and safer water-based and low VOC care and maintenance solutions to protect, clean and transform your stone, tile, masonry and grout.

Keep surfaces looking as beautiful as the day they were installed.

MICROBAN®

## Protect

Protect your investment from stains.

STONETECH® natural look penetrating sealers protect your stone, tile or grout from tough stains and keep them looking new longer, without changing the look of the surface. Without the proper protection, porous surfaces are susceptible to damage caused by common oil and water-based liquids. Prevent unsightly stains with STONETECH sealers.

**Before**  
Liquid penetrates and stains

**After**  
Liquid remains on the surface and can be wiped away

## Clean

Formulated for cleaning stone, tile and grout.

Many all-purpose cleaners are too acidic or alkaline — which can degrade your stone's sealer, leave it susceptible to staining, and even etch the surface. STONETECH cleaners are specially formulated to help you properly care for your stone, tile and grout. This complete line includes products for gentle, daily cleaning, as well as heavy-duty problem-solvers for tougher cleaning projects.

**Before**  
Built-up grime

**After**  
Restored beauty

## Transform

Restore luster and enhance stone's natural beauty.

Whether you want to restore the luster to polished stone or bring out the surface's color, depth and beauty, there is a range of STONETECH enhancing products to suit your specific needs. STONETECH 2-in-1 enhancing sealers can bring out the stone's richer, deeper color with or without more shine — all while protecting your surface.

**Before**  
Dull appearance

**After**  
Deeper tones

Care and maintenance tips

**Prevent spills from staining**  
Stone, tile and grout can vary in porosity. Common food and beverage spills can absorb into the surface and leave permanent stains. Prevent stains using a sealer such as STONETECH® BulletProof Sealer that provides maximum stain protection on the most porous surfaces. Coasters, trivets, rugs and mats are always recommended.

**Use cleaners made for stone**  
Avoid using all-purpose cleaners not specifically designed for stone. Some all-purpose cleaners (i.e. bathroom, grout and tub cleaners) may contain acid (vinegar) or alkaline (bleach or ammonia). STONETECH Stone & Tile Cleaner is pH neutral and specifically formulated to properly clean stone, tile and grout.

**Consider a cleaner & protector**  
For heavily used countertops or dense stones, a 2-in-1 cleaner & sealer such as STONETECH Revitalizer™ Cleaner & Protector is a great option. It cleans common messes while protecting against water and oil-based stains.

**Clean grout before resealing**  
When resealing your grout, first clean it with STONETECH Heavy Duty Tile & Grout Cleaner to allow sealer to properly penetrate into the grout.

**Bath & shower maintenance**  
Mineral deposits, soap scum, mold and mildew can quickly build up in wet areas such as the bath and showers. Frequent cleaning with STONETECH Stone & Tile Cleaner or STONETECH Revitalizer Cleaner & Protector and using a squeegee or dry cloth after each use will minimize residues.

Answers to common questions

**Why does my granite stain?**  
Granite is like any other natural stone—it can be porous and absorbent. Stone that has swirls and/or veins, or granite with smaller-sized crystals, tends to be more absorbent and more likely to stain.

**Why should I seal my natural stone, tile and grout?**  
Protected surfaces will be easier to clean, less likely to stain and help to preserve your surface for years to come.

**How can I tell if my stone has already been sealed?**  
Simply apply a drop of water at least ½" (13 mm) in diameter to the top of the stone and let it stand for at least 5 minutes. If, after 5 minutes, the stone does not darken, then your stone has most likely been sealed.

**Is one coat of sealer enough for natural stone?**  
When sealing dense stone, one coat should be sufficient. Most stone and grout, however, will require at least two coats of sealer.

**Will STONETECH® sealers change the look of my countertop?**  
STONETECH natural look penetrating sealers with yellow labels create an invisible shield in the stone that protect against stains without darkening or changing the stone's

appearance. STONETECH enhancing sealers, however, deepen the color, seal the stone and are clearly marked with a red label.

**How can I bring back the luster on my worn-out countertop?**  
STONETECH Stone Polish is designed to help restore the luster to a polished natural stone countertop.

**Why use water-based sealers?**  
STONETECH water-based sealers deliver superior performance, are low odor, non-flammable, have fewer fumes (lower VOC) than solvent-based sealers and thus better for you and the environment.

**What is Microban® antimicrobial product protection?**  
Select STONETECH products are built with Microban® antimicrobial product protection to continuously inhibit the growth of stain and odor-causing bacteria, mold and mildew on surfaces.
