

TILE CARE & MAINTENANCE GUIDE

For Porcelain, Ceramic and Glass Tile

CLEANING TOOLS

Porcelain and Ceramic tiles can be cleaned using a broom, vacuum, microfiber cloth and dust, jet, steam or standard mop.

Glass tiles can be cleaned using a microfiber cloth or sponge.

RECOMMENDED CLEANER

Regular cleaning with warm water and mild soap or a gentle every day cleaner are great ways to maintain your Porcelain or Ceramic tile. The right tile cleaner should lift away dust, dirt, or grime from the floor and wall tile without leaving a residue and will be formulated specifically for your tile type. To remove inorganic stains, use an acidic cleaner.

Inorganic stains are caused by soda, grout haze, soap scum, water spots, drywall, limescale and plaster residue, rust, concrete, wall paint and construction dirt.

To remove organic stains, use an alkaline cleaner. Organic stains are caused by ammonia, grease, oil, wine, beer, epoxy, urethane and pre-mixed grout stains, tire marks, thinset, adhesive tape, marker and rubber cup marks.

Glass tiles can be cleaned using a specially formulated glass cleaner with a microfiber cloth or non-abrasive sponge.

SHOWER PRODUCTS

Easily protect and maintain Porcelain, Ceramic, and Glass tiles in the shower by using either an all-purpose or heavy duty acidic cleaner. For soap scum, use a cleaner that specifically targets shower build up.

STAIN REMOVAL

Remove stains from Porcelain and Ceramic tiles with a deep penetrating cleaner and a sponge specifically indicated for tile use. For best results, remove any spills or stains as quickly as possible to avoid staining.

MOLD & MILDEW

Porcelain and Ceramic tiles naturally resist mold and mildew due to their low porosity. For additional assistance treating mold or mildew select a specially formulated cleaner that targets this issue and is suitable for your tile type and finish.

GROUT MAINTENANCE

Sealing your cementitious grout helps maintain the look and prevents mildew and mold. Sealing is optional for pre-mixed and hybrid grout. When selecting a grout sealer, choose one that is formulated specifically for your grout and tile type.

PRO TIP: It is also recommended that cleaners, treatments, and sealers are tested in a small, isolated area to ensure desired results.

Since every application is different, the suggestions mentioned above are general recommendations only. We strongly recommend consulting a licensed professional who has experience with your material type and specific situation. Always follow the manufacturer's instructions for your product when selecting and using any cleaner, treatment, or sealer.
